Mentor: Mr.Rio Swarawan from Investree

Java installation tutorial:

1. Because we use Java 11 LTS in Investree, we could download Java from this link https://www.oracle.com/java/technologies/javase/jdk11-archive-downloads.html
2. because I use Windows as my OS, click jdk-11.0.15_windows-x64_bin.exe and wait until the download finish
3. click twice the .exe file in your download directory and follow the installation instruction until finish
4. Check your Java by open Terminar, and write "java -version" without quotation mark and enter

Summary of the topic in intro (section 1 on June 15th)

Why do we use Java?

1. It's a popular programming language and has large community in the world
2. it's poweful and easy to use
3. We can use Java in multiplatform
4. We could build mobile application, desktop app,web app, web servers, and games with Java

There are some IDE to write Java easily, these are the most three IDE's used to write Java:

1. Intellij IDEA
2. Eclipse
3. NetBeans IDE

Java has a sibling, he's is Kotlin!

we could use Kotlin as alternative from Java

There some storage that we use to store data:

1. Postgre SQL
2. MySQL
3. Redis
4. RabbitMQ
